- Forest and trees are an ecological chain for the survival of living beings including humans. They absorbed all the emissions including toxic gas and carbon dioxide and then produce oxygen for humans and animals.
- Tatmadaw must systematically manage the nurseries for the success of seed germination, grow and nurse the saplings without doing the tree-planting job at a superficial level.
- As the public welfare task is one of the three main tasks of the Tatmadaw members to conserve the public natural environment, they all need to actively participate in the tree-planting ceremonies on a yearly basis.

- Tatmadaw conducted 32 tree-planting ceremonies during the period from 2011 to 2021 and planted a total of 168,087 saplings. Tatmadaw planted 4,304 saplings in the first ceremony of 2022.
- Success rate reached over 80 percent every year, except from five years when the rate fell below 60 percent. So, the success must be maintained.

Public Notification on Electricity Distribution in State Power System

Ministry of Electric Power released the following public notification stating that the power transmission lines and natural gas pipelines were blown up and destroyed and

therefore, the public are requested to understand the power outages and to help and protect us from the acts of vandalism.

Public Notification

1. The Ministry of Electric Power is working for power generation and power transmission in order for the public and industry to use electricity in respective regions and states. In addition, plans are being made to increase distribution for increasing power consumption.
2. At normal times, the maximum power generation is about (4,200 MW). However, as the production of LNG power plants, about (750 MW), has been stopped due to rising gas prices and two power lines that transmit electricity generated from the Baluchaung hydropower plants were destroyed with mines by PDF insurgents, about 170 MW that is being regularly sent to the power system are not able to be sent, and there is a power cut. The total power generation capacity (920 MW) is decreasing, but now that the rainy season has arrived, due to the decrease in power consumption and the increase in irrigation water from hydropower plants, the power system is being regulated and distributed to ensure the continuous supply of electricity to the users.
3. However, on 21-7-2022, the Zotika gas pipeline was blown up with a mine planted by PDF terrorists, resulting in the inability to transmit 200 megawatts of electricity generated by gas-using power plants into the power system. Moreover, the 132 kV Shwesayan and Tagundine towers in the upper part of the power system collapsed to the ground as its foundation nuts were loosened by PDF terrorists. Aforementioned incidents caused decrease of stability in the power system and the entire power system experienced a power

outage on 24-7-2022 due to conditions of power consumption, transmission and distribution.

4. Furthermore, due to heavy rains and strong winds on 26-7-2022, a power outage occurred in the 132 kV Tikyit-Kalaw power line, and the 230 kV Shwesayan-Aungpinle power line also experienced a power outage, reducing a total of 1,120 MW of power production in the power system and the stability of the power system, and another power outage occurred at about 15:36 hour.

5. Repairs are also being made to restore power to the current situation as soon as possible.

6. Therefore, as the power transmission lines and natural gas pipelines were blown up and destroyed, the public are requested to understand the power outages and to help and protect us from the acts of vandalism.
